PROFESSIONAL SUMMARY

IT Systems Engineer III with 11 years of experience designing, supporting, and troubleshooting complex technical environments across healthcare and enterprise settings. Senior technical authority and architect for clinical healthcare IT systems, with depth in high-availability design (SQL Server Always On, Windows failover clustering), virtualization (VMware ESXi and vCenter), Windows Server, networking, and Azure. Builds and runs agentic AI workflows and automations with the Claude API, Claude Code, and Codex, including multi-agent pipelines and self-hosted AI services. Holds CompTIA Security+ and ISC2 Certified in Cybersecurity.

TECHNICAL SKILLS

AI & Automation: Claude API, Claude Code, Codex, Microsoft Copilot, Model Context Protocol (MCP) connectors, multi-agent orchestration, prompt design, agentic workflow development

Scripting & Development: Python, Flask, PowerShell automation, Node.js, SQLite, Git, Docker, Playwright browser automation, pytest, Cloudflare Workers

Virtualization & OS: VMware ESXi, vSphere, vCenter, Proxmox VE, staged host upgrades, VM migration, Windows Server (advanced), Linux (foundational)

High Availability & Databases: MSSQL / SQL Server, Always On Availability Groups, Windows Server Failover Clustering, disaster recovery design, performance tuning

Networking & Cloud: VLANs, subnet migration and re-addressing, DHCP, DNS, firewall rules, TCP/IP, load balancing, VoIP/SIP, Azure / Entra ID / SSO, hybrid cloud

Monitoring & Ticketing: PRTG including service-dependency and availability sensor design, ServiceNow

Documentation: Technical SOPs, runbooks, architecture diagrams

Professional: Cross-functional collaboration, stakeholder communication, mentoring, multi-project management

PROFESSIONAL EXPERIENCE

IT Systems Engineer III | Primary Systems, Inc. *August 2026 – Present* | *Remote*

- Senior technical authority and architect for clinical healthcare IT systems, responsible for the design and implementation of enterprise high-availability solutions with disaster recovery capability.
- Highest point of technical escalation for complex issues across nurse call, voice and messaging, RTLS, EHR/HL7, and data solutions.
- Provide strategic direction and long-term infrastructure roadmaps, partnering with executive leadership, clinical staff, and external technology partners.
- Mentor engineers across tiers and develop technical training material and documentation standards.

IT Systems Engineer II | Primary Systems, Inc. *July 2025 – August 2026* | *Remote*

- Designed the SQL Server Always On Availability Group topology for multi-site clinical communications deployments, standardizing on paired transactional and warehouse tiers and retiring an asynchronous disaster-recovery tier the environment did not require.
- Redesigned platform monitoring around service dependencies rather than host reachability, building PRTG sensors against SQL Server Service Broker translation and availability group health. Closed a gap where activity-based monitoring could not distinguish a low-volume period from a stalled data pipeline.
- Led a staged VMware ESXi upgrade from 5.5 through 6, 6.5, and 7, migrating virtual machines between hosts inside an eight-hour clinical downtime window while resolving Dell OpenManage deployment and VIB installation failures.
- Re-addressed a full clinical communications environment onto a new subnet, including failover clusters, availability group listeners, application infrastructure, and load balancer configuration, and restored all services to operation.

- Provisioned and maintained high-availability virtualized environments across VMware ESXi and Windows Server, performing configuration, validation testing, and failover verification across multi-site hospital environments.
- Documented troubleshooting procedures, system configurations, and SOPs supporting team knowledge transfer and process consistency.

IT Systems Engineer I | Primary Systems, Inc. *June 2024 – July 2025* | *Remote*

- Onboarded rapidly to clinical communications platforms, Windows Server, VoIP/SIP, and customer healthcare environments; resolved 50+ technical issues using structured diagnostics and root-cause analysis.
- Authored technical documentation and process improvement guides; supported scripting and automation for junior team members.
- Promoted to IT Systems Engineer II within 13 months based on performance across multiple concurrent projects.

Sr. Specialist, Technology Design | Ricoh USA *August 2019 – June 2024* | *Remote*

- Designed, configured, and validated proof-of-concept environments for Fortune 5000 clients, performing functionality testing and quality assurance prior to client demonstrations.
- Conducted technical discovery sessions to gather business and system requirements, translating findings into solution designs, architecture diagrams, and integration documentation.
- Served as an escalation point for cross-domain technical issues, coordinating with engineering and product teams to resolve blockers during solution delivery.

IT Service Specialist | Ricoh USA *August 2018 – July 2019*

IT Channel Account Manager | Ricoh USA *November 2015 – July 2018*

Support Analyst | Ricoh USA *July 2015 – October 2015*

AI & AUTOMATION PROJECTS

Independent work, built and run on my own infrastructure. Details and code at mtdonnell.com and github.com/mtdonnell.

- **AI-Powered IT Knowledge Base:** Self-hosted Flask and SQLite service that uses the Claude API to turn raw IT notes into structured SOP articles, with full-text search across generated documents and their source notes. Runs in an Ubuntu LXC container on Proxmox.
- **Autonomous Multi-Agent Content Pipeline:** A crew of single-role Claude agents that hand work to one another with no human in the loop, calling ElevenLabs for narration and a generative image and video service, to turn one prompt into a finished illustrated film.
- **Shared AI Skill Library:** An indexed library of skill and workflow notes that Claude Code and Codex both load on demand, with a sync script and a written maintenance policy to keep agent context consistent between sessions.
- **silver-digest:** Python browser automation that produces scheduled sales reports for a point-of-sale system with no reporting API, delivered by Telegram, email, or SMS. In production for a two-location retailer.

EDUCATION & CERTIFICATIONS

B.S. Business, Information Technology Management | Western Governors University, 2020

A.A. General Studies | Jefferson College, 2016

Certifications: CompTIA Security+ (Feb 2024) | ISC2 Certified in Cybersecurity, CC (Apr 2024)
